Introduction

Android is a Linux-based operating system, primarily designed for touch-screen mobile devices such as smartphones and tablets, initially developed by Android Inc., which is financially backed by Google. Android is an open source and Google releases the code under the Apache License.

According to Google, 500 million Android devices were activated by beginning 2013 and keeps to increase by up to 1 million every day. Android Application Development is one of the highest booming platforms which lead towards the development of contemporary, innovative and creative application for our clients. Android brought a new wave in the mobile industries which have witnessed to be revolutionized turning point in the mobile application development services.

Android applications are written in the Java programming language. Our Android Application developers have years of experience in the mobile application development space and are well conversant with Android Software Development Kit (SDK), OpenGL, 3D graphics, Android Media API's, Location-based Service API's, Wi-Fi APL's, Android Security Architecture and the other technologies required to build best in class.

We follow an easy process for Android Application Development that includes:

- Analyses of your business objective Conceptualization of the mobile application and creating the application flow
- Developing and deploying the mobile application on the app store as an enterprise application or as a downloadable application, depending on your requirements

Android Features

- Simple and powerful RAD tool for developing native Android applications without time-consuming Java / Eclipse programming
- Complete IDE and programming language 100% focused on Android development
- Compiles to native byte code. No runtime libraries are required. APK files are exactly the same as APK files created with Java / Eclipse
- Performance is similar to applications written with Java
- Object oriented programming language (syntax similar to MS Visual Basic)
- No need for XML programming
- Highly extensible with support for custom Java libraries
- Powerful designer scripts feature. Lets you easily create sophisticated layouts
- Supports all Android phones and tablets from Android 1.6 and up to Android 4.x
- Built-in code obfuscation

The biggest challenge that companies face today is staying ahead of the technology curve. To keep up with the competition, new products must be introduced at a regular interval with new features. Our product services are aimed at helping customers bring your new products to market, within budget and on schedule.

Our Services include:

- Architectural design
- System level design
- Software development
- Module integration and testing
- Performance Benchmarking
- Internal Staging and Real life testing for beta releases
- Launch of the Product
- Application testing and QA

A large number of mobile companies are using Android. A list of companies supporting Android in their hardware:

- Acer Inc
- ALCATEL (TCL corporation)
- Bluelans Communications
- NCE Casio Mobile Communications
- Cherry Mobile
- CSL
- Dell
- Garmin
- General Mobile
- Huawei
- LG
- Motorola
- Samsung
- Sony Ericsson
- Videocon
- ZTE
- High screen
- HKC
- HTC corporation
- I-mobile
- Lenovo

Advantages of Android

- **Multitasking**

Android phones can run many applications, it means you can browse, Facebook while listened to the song

- **Easy access**

to thousands of applications via the Google Android App Market when you install applications or games through Google's Android App Market, you can download the applications for free. There are many thousands of applications and games that are ready for download on Android phones

- **Can install a modified ROM**

not satisfied with the standard view of Android, do not worry there are many custom ROM that can be used in your mobile phones Android

- **Widget**

absolutely right, with the widgets on the home screen, you can easily access a variety of settings quickly and easily

- **Google Maniac**

if you are a loyal user of Google services ranging from Gmail to Google Reader Android phone, integrated with Google services, you can quickly check e-mail from Gmail account

- **Removable Storage and Battery**

- **Wireless App Installation**
