OVERVIEW

The Client offers a technical management system to its Customer for providing various daily needs goods like Groceries Items, Fruits & Vegetables, Cosmetics etc. and "house-keeping services" at their door step after simple registration and service charges.

KEY CHALLENGES

The solution confronted multiple technical and process oriented challenges. We have not only met all the challenges but offered a great value addition to our client

- Distributed procurement centers has to be connected to one warehouse and inventory management system
- Integration of the various business activities
- Different user interface for different stakeholders
- Data of varied domain has to be accessed from one place. Creating system from scratch was a time consuming and redundant task
- Call center services and customer management
- Managing large amount of data
- Managing various categories of services from one solution
- Handling centralized procurement system
- Connecting multiple service points to one system
- task which needed to be dynamic in nature and configurable

The concept of developing a framework to automate application creation, UI provisioning, setting up networks, server and database management and offer configuration work was conceived and evolved

YASH COMPUTECH SOLUTION

Our team designed and developed a custom application To implement the technological framework and address the challenges described above. It offers an excellent database management with a browser-based interface for UI provisioning, business parameters, and offers Configurable features. Our team develops application controls and deploys them through the browser interface.

HIGHLIGHTS AND BENEFITS

The application has following key features:

- **Web interface** for Customer registration and order booking and membership management
- **Call Center** services to help client with various enquiries
- **Admin login** to manage procurement points and centralize warehousing system with complete Inventory management.
- **Dashboard** for identifying real-time business insights
- Managing **memberships**
- Barcode and thermal printing
- More than 100 customized reports related to procurement, money management, sales, and WHM and inventory management.

The concept of home delivery has been unique to India. The solution demands channelizing the complete business processes to a centralized system from booking home delivery orders, procurement and tracking deliveries and managing inventory centrally for various point of sales and procurement centers.
